IMPACT

In this challenge, more than 20 change makers from all over the world collaborated for 8 weeks to build the AI solution

The Project:

Digitizing the Documents and Books for Accessibility with Machine Translation and NLP

CERTIFICATE OF ACHIEVEMENT

THIS IS PRESENTED TO

Zecil Jain

| Junior ML Engineer

For participating in the Omdena AI challenge in collaboration with the commercial arm of Royal Government of Bhutan, Druk Holding & Investments. Within two and half months, the team developed an end-end pipeline consisting of a Machine Translation Model and a User Interface. The solution helps in translating the input data from Bhutanese National Language (Dzongkha) to English which would further help the public in accessing the written works and information.
